Notes:
1. All inside mount valances come with valance trim plates and no returns. Valance width = shade width – 1/8”.
2. Outside mount valances are available with a 1” return, 4” return or no return. The 1” or 4” inside valance returns provides a valance projection of 1 3/4” or 4 3/4”. Valance width = shade width + 2” unless alternative width specified.
3. For partial inside mounts with shade inside opening and valance outside opening, order as outside mount (specify return option and exact valance width desired).
